

Bystander

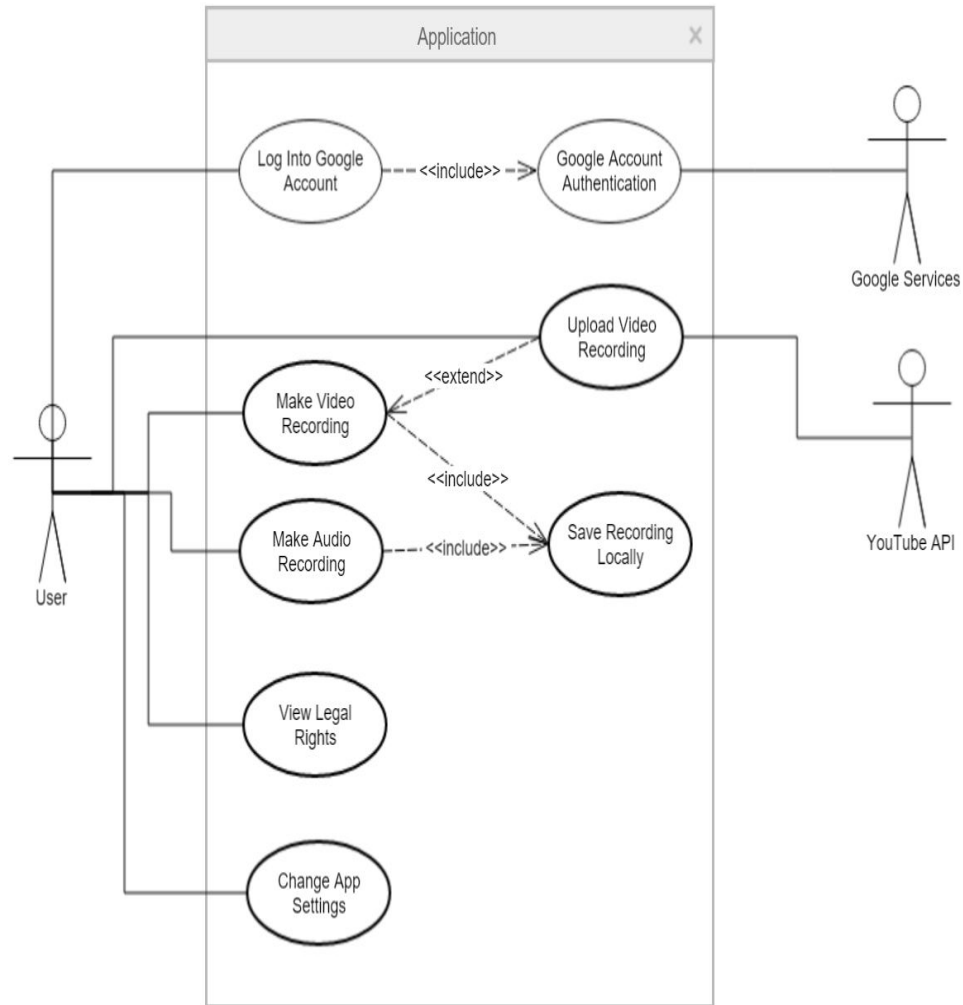

Brian Burns, Amy Chockley, Amy Puente

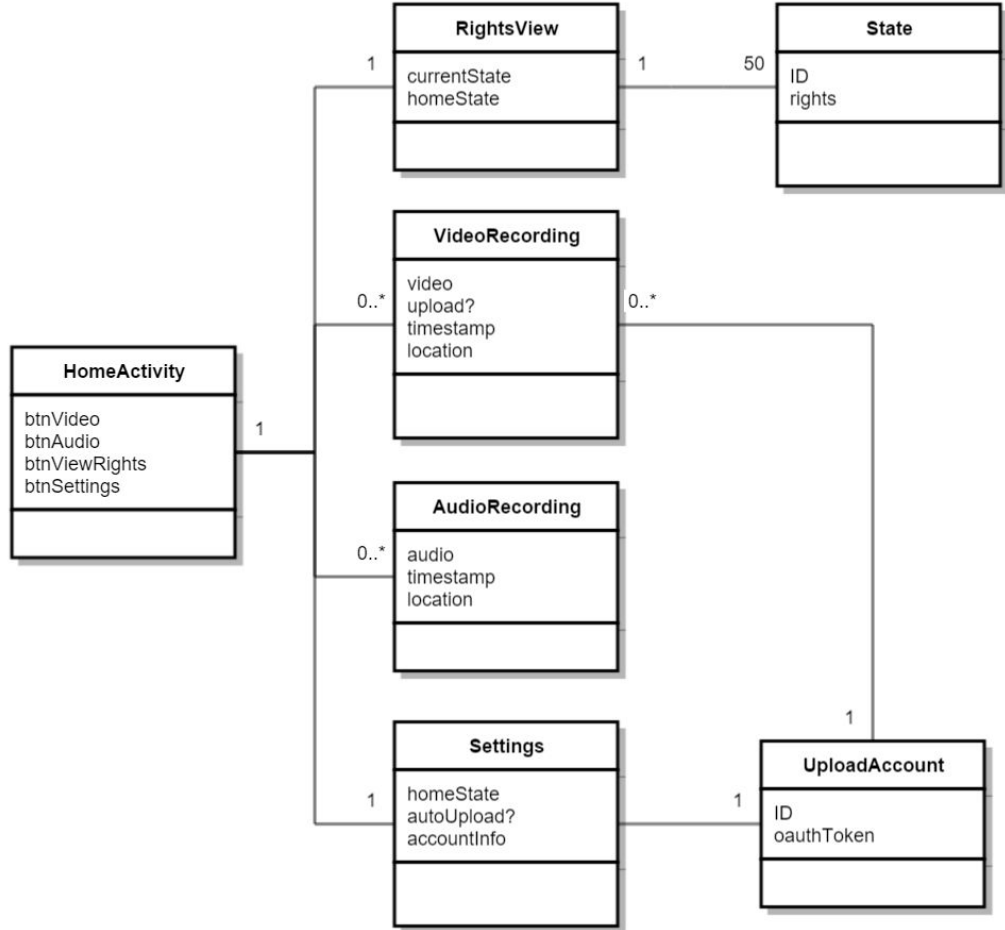

Project Scope

- Bystander will allow users to create audio and video recordings and upload them to a remote location, using a broadcast style of upload.
- The application will also feature a section outlining the legal rights a person possesses when making audio and video recordings of 3rd parties in public and private locations.
- The application will provide an easy to use interface and will offer users a modern and fast way to create and ensure the preservation of their recordings, while also supplying them with a clear overview of their legal rights.

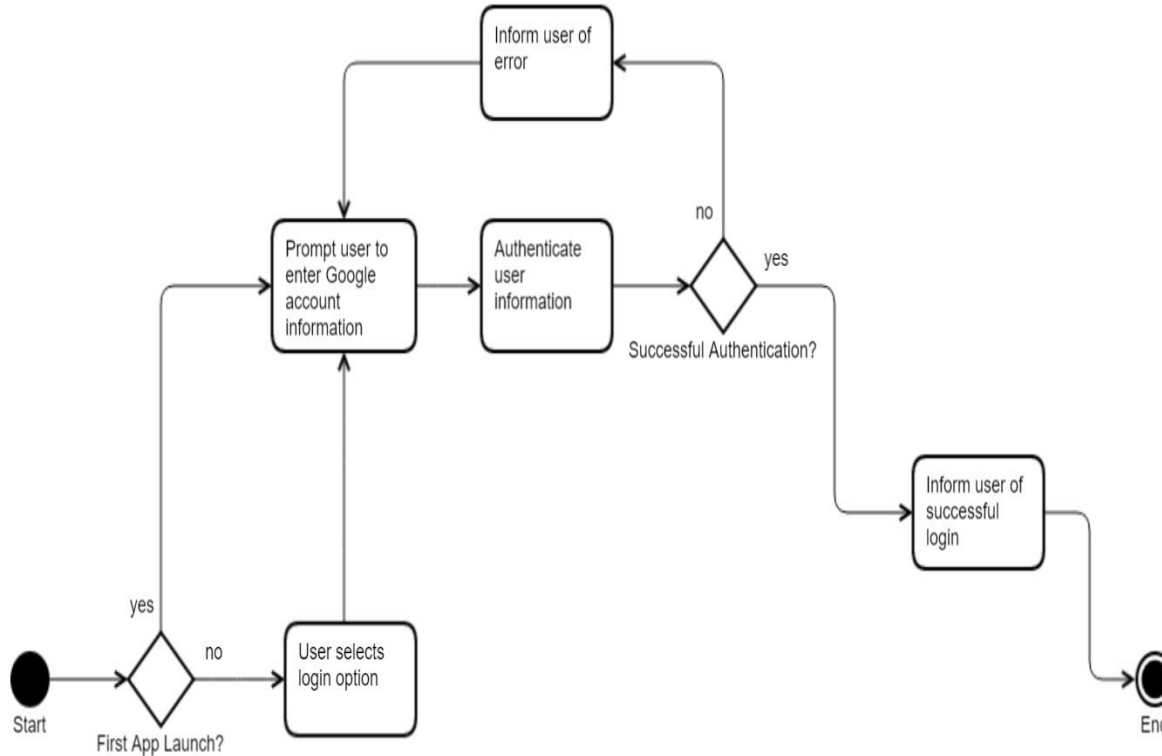

Use Case

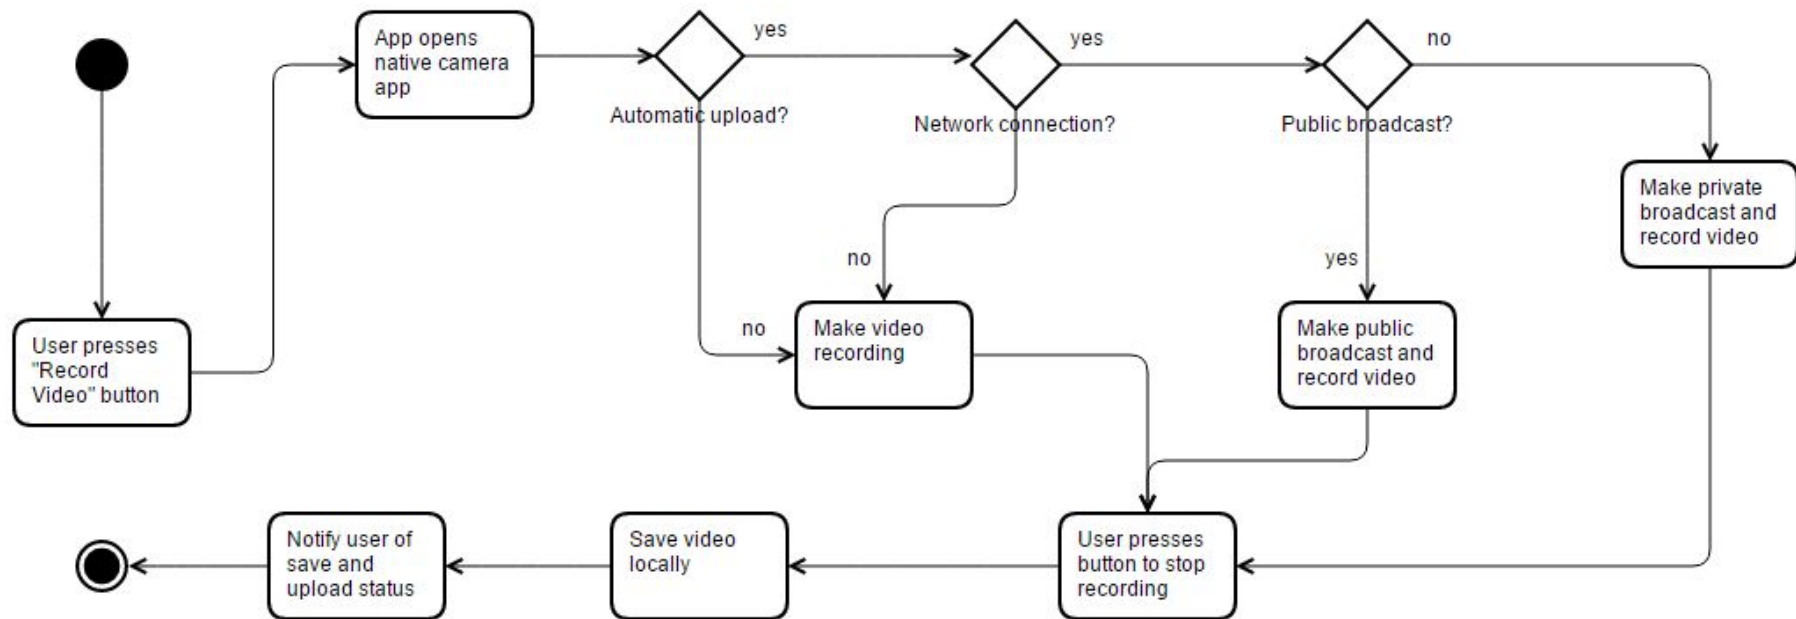

Class Diagram

Log In To Google Account

Make Video Recording

Required Features

- Video Recording
- Video Broadcast Option
 - Google account integration
- Know Your Rights section

Possible/Future Requirements

- Audio recordings and uploads
- Added security to application
- Location tracking for Know Your Rights section
- Autosave to Google Drive instead of YouTube

Potential Risks

- Uploading illicit content to YouTube
- Illegal recordings made in public or private domains

- Possible Remedies:
 - Getting user agreement to their state's laws before recording
 - Uploading to user's personal Google account may remove liability

App Summary

- Bystander allows users to record police interactions with automatic video backup
- We help users stay informed on the recording laws in their locality
- We offer a modern and enhanced experience to that of current recording applications
 - Broadcasting and possible audio recording
